

Java Assignment: Functions

Part A: Basic Functions

1. Write a function to add two numbers using a user-defined function.
 2. Write a function to check whether a number is even or odd.
 3. Write a function to calculate the square and cube of a number.
 4. Write a function to find factorial of a number.
 5. Write a function to check whether a number is prime or not.
-

Part B: Functions with Logic

6. Write a function to reverse a number without using array/string.
 7. Write a function to check whether a number is palindrome or not.
 8. Write a function to check whether a number is Armstrong or not.
 9. Write a function to find the GCD of two numbers.
 10. Write a function to check whether a number is perfect or not.
-

Part C: Functions with Arrays (Basic–Medium Level Only)

11. Write a function to input an array and print all elements.
12. Write a function to find the maximum element in an array.
13. Write a function to find the minimum element in an array.
14. Write a function to calculate the sum of all elements in an array.

15. Write a function to count even and odd numbers in an array.
 16. Write a function to search an element in an array (linear search).
 17. Write a function to copy elements of one array into another.
 18. Write a function to print the array elements in reverse order.
 19. Write a function to sort an array in ascending order.
 20. Write a function to merge two arrays into a third array.
-

Part D: Applied Functions

21. Write a function to calculate simple interest.
22. Write a function to calculate compound interest.
23. Write a function to swap two numbers without using a third variable.
24. Write a function to convert Celsius to Fahrenheit.
25. Write a function to print a multiplication table of any number.
